The New Paradigm of Knowledge

DB Seret leads companies towards the new challenges posed by the market and the growth through innovative processes and technologies aimed at preserving and developing the knowledge of each Organization.

Our vision is to make organizations' development process sustainable by leveraging the capital of knowledge through its organization and preservation over time.

To be the ideal partner of organizations to support their growth towards a sustainable and successful future ***is our main goal and social role. To preserve all knowledge*** of organizations by bringing value to processes and involving stakeholders represents ***our added value.***

Values to which all DB Seret staff are inspired in ordinary and strategic activities with and for customers are based on professionalism, confidentiality, individual and social responsibility, transparency and ongoing training.

Innovation and engagement are our successful drivers for the sustainability of organizations while respecting the Fundamental Values underlying our actions.

Technological and methodological Solutions for Digital Transformation

Different skills and multidisciplinary are important tools in our approach to achieve innovations required by the market in order to move towards new digital challenges.

The technologies used and the solutions found allow delivering our customers concrete and definitive solutions in the long-term preservation and sensitive data management. The combination of humanistic, scientific and technological approaches makes our action the most innovative one and the closest one to the customer and market needs.

Our goal is to preserve knowledge and allow our customers to develop a new one by cancelling the risks associated with time and technological obsolescence. Our mission is to allow companies and organizations to manage and disseminate in the future the capital of knowledge acquired in the past.

Our value added solutions placed on the market range from Long Term Digital Preservation (LTDP) to Data & Knowledge Management up to services such as System integration, IT outsourcing, Data processing, Document management, Optical Acquisition, and RFID Solutions for Archiving, Video Surveillance, access management, asset tracking and management and libraries.

Competencies for Digital Economy

Our skills enable us to provide solutions, innovate processes, streamline activities in order to conserve and preserve information, content, and both naturally digital and non-digital documents.

Our areas of expertise range from developing innovative software to methodologies to streamline processes up to the realization of custom solutions for the fullest customer satisfaction.

We care about the whole value chain of information and data in whatever format they are.

We manage, archive and preserve all content and develop sustainability approaches for the customer to bring organizations to a future of expertise and value

Solutions and Services for the New Digital Era

LTDP - Data & Knowledge Management

Long Term Digital Preservation (LTDP) solutions involve the use of FITS format resulting in the creation of an image archive that will be valid and useful even after 100 years. Omnes is our technology solution of LTDP and Data Management.

Omnes by using the FITS format, aims to allow interdisciplinary sharing of digital and analogue documents and contents, while also preserving them. The latter are available through the innovative digital format that is self-consistent in terms of both its conservation and its management and dissemination in the future.

The platform, in compliance with the most common Standards such as OAIS, PREMIS, Dublin Core and METS, allows you to preserve over the long term and disseminate all content and documents thanks to the conversion engine from the FITS format to the most common current formats such as PDF and PDF/A .

Added-value Technological Services

DB Seret, through the experience acquired over 15 years in RFID solutions and archive management, provides innovative solutions in business processes, physical and digital file archiving, integration of RFID technologies and value-based consulting.

Heritage & Government

Industrial, Chemical, Pharma, Oil & Gas, Bank & Finance, Consulting, Automotive, Food, Healthcare, R&D

A nighttime photograph of a modern city street. The scene is dominated by a large, dark blue diagonal shape that cuts across the frame from the top left towards the bottom right. In the background, a multi-story building with many lit windows is visible. The street below shows light trails from cars, with red and white streaks indicating movement. The overall mood is futuristic and dynamic.

Preserving OUR *Past* *Embracing* OUR *Future*
